

# WARNING:

From Wake County Government

**DO NOT** take any fish from  
**Lake Crabtree, or Crabtree Creek, just  
above or below the lake.**

The State Department of Health and Human Services has warned the public not to eat any catfish or carp from the lake. Routinely eating fish from the lake or the creek may increase your risk of:

- Cancer
- Infections
- Skin problems (including cracked fingernails)
- Learning problems in children born to women who eat fish from these waters.

High levels of chemicals (PCBs) have been found in the fish.

If you have routinely eaten fish from these waters, and have questions about your health, please call your doctor or Dr. Ken Rudo with the North Carolina Department of Health and Human Services at 919-570-5911.
